

## **Security Information**

### **AgeReady Site**

<https://beageready.com>

### **Security of Data**

This site is housed in a secure cloud-based environment and further security measures are discussed as follows:

### **Security of Sign up**

The application requires dual authentication for email address submitted. Each user receives an email after creating the account to verify that the email address is valid.

### **Security of stored data**

Email address is captured for the user only (person signing up to access the AgeReady assessment.) And no other personal information is captured related to the user or the assessment recipient(s).

### **Document Uploads**

We recommend that documents uploaded should not contain sensitive information. As an example, if medications are listed on a document, be sure to strike through any personal and sensitive information on the document.

### **HIPAA**

AgeReady is not a covered entity as defined in HIPAA rules (health plans, health care clearinghouse and health care providers who electronically transmit any healthcare information in connection with transactions for which HHS has adopted standards. ([Summary of the HIPAA Privacy Rule | HHS.gov](#)))

### **User Sharing Access (email address and password)**

Many users may want to share their access information to the site with family members or loved ones helping with care of the older person.

We recommend doing this if desired so that loved ones can access it.

### **Emails or phone calls coming from AgeReady**

Users may receive emails periodically from AgeReady about the program and tasks as more current information may become available. At no time will AgeReady ask for any personal information and please report any unusual correspondence to [info@beageready.com](mailto:info@beageready.com).

## Security Questions & Answers

### Do you use CloudFlare?

No, we do not use CloudFlare.

### Is there Multi-factor Authentication?

No. Authentication is handled by a sign-in link emailed to users.

### Who is hosting the site?

The site is hosted in AWS.

### Do you have any firewalls built in?

Yes. We use AWS API Gateway.

### Are there backups?

Yes. Data is backed up for 35 days.

### Do you use Captcha?

No.

### Are you HIPAA Compliant? If no, why not?

No, we are not HIPAA compliant. However, all data is encrypted in transit and at rest.

## Additional Security Information

- All data is encrypted both in transit and at rest.
- Authentication is managed through secure emailed sign-in links.
- Infrastructure is hosted within Amazon Web Services (AWS).
- AWS API Gateway is used to provide firewall and API protection.
- System backups are retained for 35 days.
